The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            herbicides

Rafal seed pods is useful for controlling dehiscence. Manipulation of the enzyme's activity can influence the timing of dehiscence. A cDNA clone (AAT33994) coding for the PG was isolated from a cDNA library of the rape seed pod dehiscence zone. PG nucleic acids (partic. antisense) can be used to regulate dehiscence in crop plants. (Updated on 16-OCT-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides a nucleic acid encoding a signal transduction protein involved in the process of dehiscence. The nucleic acids and proteins are useful for regulating or controlling dehiscence of a pod an anther in a plant, useful in the production of male sterile plants. The methods, etc. may be used in production of shatter resistance or shatter-delayed plants such as oilseed rape (Brassica napus). The presentence represents a B. napus Sac66 protein putative sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A nucleic acid encoding a signal transduction protein involved in plant dehiscence, useful for producing shatter resistant male sterile plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Signal transduction protein; dehiscence; male st shatter resistance; oilseed rape; Sac66 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wyatt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-MAR-1998;

                                                                                                                                                                                                                                                                                                                                                                                         During early ripening of peaches, tissue firmness decreases slowly and progressively. Towards the end of ripening, loss of tissue firmness is capid. This second stage of softening is called the "melting" stage. Crapid. This second stage of softening is called the "melting" stage. Cof softening. Ripe fruit remain relatively firm and maintain their shape throughout processing. Fruit of "melting" varieties show an increase in cathvity of endopolygalacturonase (EndopG) during ripening. Cof softening (PG) is believed to contribute to fruit softening through its action on intercellular and cell wall pectins. The sequence can be used to manipulate plants of the Rosaceae family, especially peach or prunus to either prevent or enhance capression of PG. The sequence can also be used in efficient breeding programmes. See also AAR48675, AAR48676. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-OCT-2003 to standardise OS field)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It was used to isolate the PG promoter in the construction of a vector encoding antisense RNA to the PG cDNA and PG gene. This would be useful to regulate the expression of the fruit softening enzymes in flowering and fruiting plants. Such antisense RNA would delay fruit softening. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PN pF field.) (Updated on 25-MAR-2003 to correct PN pF field.)

CC The invention provides a new method for modifying pectin that involves CC providing a host having pectin methylesterase (PME) activity and CC polygalacturonase (PG) activity, transforming the host by silencing PG CC activity to provide an increased PME to PG ratio, preparing a PME extract CC from the transformed host, and using the PME extract to modify pectin. A CC an increased functionality to food products such as yogurt, milk/fruit CC in a pectin in a block-wise manner, and to de-esterify two or more CC adjacent galacturonic acid residue of a pectin on at least substantially CC sequence of pTOM6 encoding a PG enzyme. A nucleotide sequence (seq Id No. 3) encoding the PG enzyme which is deposited as pTOM23 with NCIMB CC (Accession number 12373) is also claimed. The sequence for seq ID No. 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                     This cDNA clone, encoding polygalacturonase (PG), is used to produce antisense mRNA (with an inverted sequence to that of PG mRNA) which is inserted into a vector used to transform plants which thereafter have altered ripening properties. The inverted sequence and the PG mRNA for double-stranded structure which inhibits expression of the PG mRNA. Se also AAN80488. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (ICIL )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic.

An An an improved method for inhibiting the CC expression of a target gene in a cell, by expressing in the cell an CC expression cassette comprising a promoter operably linked to a sense or CC antisense targeting sequence having substantial identity to a subsequence CC of the target gene, and an inverted repeat (IR) of a subsequence of a NOS (nopaline synthase) gene, where the IR is unrelated to the targeting sequence. The expression cassette, pFP-IRN1 is constructed using a CC (5'-UTL) is derived from a plant heat shock 70 (hsp70) gene, the tomato CC (5'-UTL) is derived from a plant heat shock 70 (hsp70) gene, the tomato CC (polygalacturonase (PG) gene and an IR of the terminator of the Expression of endogenous genes and transgence, e.g. to regulating expression of endogenous genes and transgence, e.g. to regulate CC expression of endogenous plant phenotypes such as disease resistance, eflavour, protein or nutritional characteristics. The improved gene construct is used in functional genomics to determine the silencing construct is used in functional genomics to determine the throughput studies. Multiple transgence, and is suitable for high-transgene. The method is simple and rapid, and is suitable for high-transgence the limitial silencing trigger mediated through the inverted repeat region will apply to all of the transcripts. The present sequence represents the expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Reducing the expression of a target gene in a cell, comprises expressing in the cell an expression cassette comprising a promoter operably linked to a sense or antisense targeting sequence and an inverted repeat of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         15-AUG-2000;

pathogenic infecti bacterial, fungal g at least infection fungal or one gene involved in plant resistance or response for conferring resistance or tolerance to a plant viral infection by determining or detecting plant t to

Claim 6; ij NO 557; 899pp; English

comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present securior a plant to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문
A cDNA clone (AAT33994), designated SAC66, codes for a polygalacturonase (AAW04248) that is expressed specifically in the dehiscence zone (DZ) of oilseed rape cv. Rafal seed pods. Degenerate PCR primers based on multiple sequence alignments of fruit- and pollen-specific polygalacturonases were used to amplify cDNA from the DZ. A PCR fragment (AAT33999) was generated and used to screen a DZ CDNA library, yielding clone SAC66. The gene can be used in transgenic crop plants to regulate pod dehiscence. Antisense sequences reduce or prevent dehiscence and hence loss of seed prior to harvesting. (Updated on 16-OCT-2003 to

```
cDNA clone X (AAT63603) includes a coding sequence for oilseed rape dehiscence zone (DZ)-selective endopolygalacturonase (PG). DZ cDNA was subjected to PCR amplification using primers (see also AAT63605-08) based on conserved regions of PG amino acid sequences. PG-related clones (see also AAT63609-14) were identified, of which only Ipg35-8 was specific to the DZ. This clone was used to screen a DZ-selective cDNA library prepd. From poly-A+ RNA isolated from the DZ 6 wk after anthesis, yielding clone x. Ipg35-8 was also used to screen a genomic library to identify the DZ-utilised in novel chimeric genes to modify the dehiscence properties of transgenic plants, partic. the pod dehiscence properties of B. napus. This can improve the seed yield from the transformed plants. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 17-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 modified dehiscence properties, especially delayed pod dehiscence
                                                                                                                                                                                                                                                                                                                                                                                                                            6,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAZ22980
                                                    The invention provides a nucleic acid encoding a signal transduction protein involved in the process of dehiscence. The nucleic acids and proteins are useful for regulating or controlling dehiscence of a pod c an anther in a plant, useful in the production of male sterile plants. The methods, etc. may be used in production of shatter resistance or shatter-delayed plants such as oilseed rape (Brassica napus). The prese sequence represents the DNA encoding a B. napus Sac66 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                               The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                    Seguence 1280

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rice
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying at least one gene involved in plant resistance or respathogenic infection for conferring resistance or tolerance to a bacterial, fungal or viral infection by determining or detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene
